

Product Specialist Life Science

Your challenges

You will be covering Europe as a product specialist for JSR Life Science products

You will:

- . expand our market network and build realistic value adding business cases for JSR products for the Life Science industry
- . identify and build business relationships with new accounts
- provide technical and scientific support to existing and new accounts
- . from your analysis of market trends extract strategic management recommendations, vital for managing our future business development.
- work closely together with the different account managers, other product specialists and our global HQ in Japan
- report to the Business Development manager

Profile

You have a master in bio sciences (biochemistry, bio-engineering sciences, biology, biomedical sciences,), or you are a bachelor with relevant experience in the Life Science Industry.

The ideal candidate has experience in a technical-commercial function in the Life Science and/or Biotechnology industry. Experience in (Molecular) Diagnostic or Bioprocessing is a plus.

You combine a technical background with good marketing skills.

You have good organizational and people skills. You are a team player and you like working in a multicultural environment. You will be travelling up to 50% of your time and your home base is our European HQ in Leuven, Belgium. You are fluent in English. Any additional European language is an asset.

What can you expect from JSR?

JSR Corporation is a multinational company employing over 5000 people and is a leading materials supplier in a variety of technology driven markets. We are a research-based company focusing on strategic partnerships with key innovators and market leaders in the industry to give them a unique competitive advantage based on innovation, quality and cost.

JSR offers you an attractive salary package based on experience and performance, next to an interesting extra-legal package. You will be working in a multicultural environment in which the boundaries of technology are continuously being pushed to the limits.
